

OVERALL SCORE

30 /100 Poor

Executive summary

This site is difficult for AI tools to read right now. Key strengths include AI guidance file and sitemap, while homepage access and crawler policy need attention. Recommended next step: remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

Recommended next step

- 1. Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.
- 2. Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.
- 3. Serve a markdown representation of the homepage for requests with Accept: text/markdown, including markdown headings, links, and concise page content with Content-Type: text/markdown.

Signal breakdown

Crawlability	Fail	0/20
Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.		
Robots.txt	Fail	0/15
Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.		
llms.txt	Pass	15/15
The llms.txt file was found and includes the expected text, length, heading, and URL signals.		

Sitemap	Pass	10/10
The sitemap index is valid and the checked child sitemap contains URL entries.		
Markdown support	Fail	0/15
Serve a markdown representation of the homepage for requests with Accept: text/markdown, including markdown headings, links, and concise page content with Content-Type: text/markdown.		
Semantic HTML	Fail	0/10
Add a title tag between 10 and 70 characters. Add a meta description between 50 and 160 characters. Add exactly one h1 element that describes the page topic. Add missing semantic elements: main, article, nav, footer.		
Structured data	Fail	0/10
Add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.		
Content signals	Pass	5/5
Consider adding Content-Signal HTTP header, AI-specific head meta tags, robots noai/noimageai directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.
