Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include AI guidance file and sitemap, while plain-text page access and homepage access need attention. Recommended next step: make the homepage respond successfully to requests with Accept: text/markdown, either by serving markdown directly or by adding a markdown variant URL with correct content negotiation.

Recommended next step

1. Make the homepage respond successfully to requests with Accept: text/markdown, either by serving markdown directly or by adding a markdown variant URL with correct content negotiation.
2. Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access; serve a non-empty HTML homepage with a canonical link tag.
3. Fix robots.txt syntax issues so each rule uses Field: value format, directives appear under a User-agent, and Sitemap entries use absolute URLs.

Signal breakdown

Crawlability Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access; serve a non-empty HTML homepage with a canonical link tag.	Warn 10/20
Robots.txt Fix robots.txt syntax issues so each rule uses Field: value format, directives appear under a User-agent, and Sitemap entries use absolute URLs.	Warn 7.5/15
llms.txt The llms.txt file was found and includes the expected text, length, heading, and URL signals.	Pass 15/15

Sitemap	Pass	10/10
The sitemap.xml file is valid and contains URL entries.		
Markdown support	Fail	0/15
Make the homepage respond successfully to requests with Accept: text/markdown, either by serving markdown directly or by adding a markdown variant URL with correct content negotiation.		
Semantic HTML	Warn	8.6/10
Add missing semantic elements: main, article.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding Content-Signal HTTP header, robots noai/noimageai directive, Content-Signal robots.txt directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.

llms.txt
MARKDOWN
# Psicologos online | Terapia psicologica segura - Kivaria

> Kivaria: terapia online con psicologos sanitarios acreditados. Reserva tu
primera sesion y empieza tu camino hacia el bienestar emocional.

This llms.txt file summarizes the public, canonical resources that AI
assistants and crawlers should use to understand this site.

## Site Overview

- Canonical URL: https://kivaria.com/
- Site type: professional service
- Recommended summary: Kivaria: terapia online con psicologos sanitarios
acreditados. Reserva tu primera sesion y empieza tu camino hacia el
bienestar emocional.

## Core URLs

- [Homepage](https://kivaria.com/): Primary public entry point and canonical
site overview.
- [Terapeutas](https://kivaria.com/terapeutas): Important public page
discovered from the homepage navigation.
- [Como funciona](https://kivaria.com/como-funciona): Important public page
discovered from the homepage navigation.
- [Blog](https://kivaria.com/blog): Editorial updates, announcements, and
current context.

robots.txt additions

TXT

```
# robots.txt additions
# Copy these blocks into the existing robots.txt file. Keep current rules
unless a note calls out a conflicting Disallow.

# AI crawler access
# Add explicit Allow rules for blocked AI crawlers; remove or narrow
conflicting Disallow rules if your crawler target requires precedence.

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
'''http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
'''
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

HTML meta tag alternatives

Add these inside the document '`<head>`' when server headers are not
