OVERALL SCORE

56 /100

Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include plain-text page access and sitemap, while structured data and content signals need attention. Recommended next step: add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.

Recommended next step

1. Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access; serve a non-empty HTML homepage with a canonical link tag.
2. Add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.
3. Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access.

Signal breakdown

Crawlability

Warn 10/20

Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access; serve a non-empty HTML homepage with a canonical link tag.

Robots.txt

Warn 7.5/15

Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access.

llms.txt

Warn 7.5/15

Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

Sitemap

Pass 10/10

The sitemap.xml file is valid and contains URL entries.

Markdown support

Pass 15/15

The homepage returns markdown content when requested with Accept: text/markdown, giving AI systems a cleaner text representation with less navigation chrome to parse.

Semantic HTML

Warn 5.7/10

Add exactly one h1 element that describes the page topic. Add missing semantic elements: main, article, nav, footer. Add visible body copy after script and style removal so the page has at least 200 words.

Structured data

Fail 0/10

Add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.

Content signals

Fail 0/5

Add the standard directive 'Content-Signal: ai-train=no, search=yes, ai-input=yes' to robots.txt, HTML metadata, or HTTP headers so AI systems can discover content usage preferences.

Suggested fixes

Fix Structured data

HTML

```
<script type="application/ld+json">
{
"@context": "https://schema.org",
"@graph": [
{
"@type": "Organization",
"@id": "https://getlifepath.com/#organization",
"name": "LifePath - Your Life. Organized. Beautifully.",
"description": "Discover LifePath, the productivity app where beautiful
design meets deep focus. Organize your life with a sleek Kanban board built
for visual thinkers.",
"url": "https://getlifepath.com/",
"logo": "https://getlifepath.com/favicon/apple-touch-icon.png"
},
{
"@type": "WebSite",
"@id": "https://getlifepath.com/#website",
"name": "LifePath - Your Life. Organized. Beautifully.",
"description": "Discover LifePath, the productivity app where beautiful
design meets deep focus. Organize your life with a sleek Kanban board built
for visual thinkers.",
"url": "https://getlifepath.com/",
"publisher": {
"@id": "https://getlifepath.com/#organization"
},
"inLanguage": "en"

Fix Content signals

HTML

```
<meta http-equiv="Content-Signal" content="ai-train=no, search=yes,
ai-input=yes" />
<meta name="content-signal" content="ai-train=no, search=yes, ai-input=yes"
/>
```
