Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include homepage access and crawler policy, while plain-text page access and page structure need attention. Recommended next step: add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Recommended next step

- 1. Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.
- 2. Shorten the title tag to 70 characters or fewer. Shorten the meta description to 160 characters or fewer. Use exactly one h1 element and move secondary section titles to h2-h6. Avoid skipped heading levels so sections progress from h1 to h2 to h3 without gaps. Add missing semantic elements: article.
- 3. Prefer valid JSON-LD and fix malformed JSON-LD script tags for clearer AI interpretation.

Signal breakdown

Crawlability Pass 20/20

The homepage resolves, connects, returns HTTP 200 OK, exposes a canonical URL, and is not blocked by robots.txt.

Robots.txt Pass 15/15

robots.txt allows crawler access and includes Sitemap references.

llms.txt	Pass	15/15
The llms.txt file was found and includes the expected text, length, heading, and URL signals.		
Sitemap	Pass	10/10
The sitemap.xml file is valid and contains URL entries.		
Markdown support	Fail	0/15
Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.		
Semantic HTML	Fail	0/10
Shorten the title tag to 70 characters or fewer. Shorten the meta description to 160 characters or fewer. Use exactly one h1 element and move secondary section titles to h2-h6. Avoid skipped heading levels so sections progress from h1 to h2		
Structured data	Warn	5/10
Prefer valid JSON-LD and fix malformed JSON-LD script tags for clearer AI interpretation.		
Content signals	Fail	0/5
Add the standard directive 'Content-Signal: ai-train=no, search=yes, ai-input=yes' to robots.txt, HTML metadata, or HTTP headers so AI systems can discover content usage preferences.		

Suggested fixes

Fix Structured data
