OVERALL SCORE

68 /100

Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include plain-text page access and sitemap, while AI guidance file and homepage access need attention. Recommended next step: publish an AI guidance file as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

Recommended next step

1. Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.
2. Serve a non-empty HTML homepage with a canonical link tag that points to the preferred public URL.
3. Fix robots.txt syntax issues so each rule uses Field: value format, directives appear under a User-agent, and Sitemap entries use absolute URLs.

Signal breakdown

Crawlability

Warn 10/20

Serve a non-empty HTML homepage with a canonical link tag that points to the preferred public URL.

Robots.txt

Warn 7.5/15

Fix robots.txt syntax issues so each rule uses Field: value format, directives appear under a User-agent, and Sitemap entries use absolute URLs.

llms.txt

Fail 0/15

Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

Sitemap

Pass 10/10

The sitemap index is valid and the checked child sitemap contains URL entries.

Markdown support

Pass 15/15

The homepage returns markdown content when requested with Accept: text/markdown, giving AI systems a cleaner text representation with less navigation chrome to parse.

Semantic HTML

Pass 10/10

The homepage has a valid title, meta description, heading structure, semantic landmarks, substantial body copy, and descriptive anchor text.

Structured data

Pass 10/10

Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.

Content signals

Pass 5/5

Consider adding Content-Signal HTTP header, AI-specific head meta tags, robots noai/noimageai directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.

Suggested fixes

llms.txt

MARKDOWN

```
# RHYMA - Collaborative Poetry App, One Line at a Time

> A collaborative, AI-free poetry game, now on Google Play. Add one line,
pass it to strangers, and discover the poem together. iOS early access is
open.

This llms.txt file summarizes the public, canonical resources that AI
assistants and crawlers should use to understand this site.

## Site Overview

- Canonical URL: https://www.rhyma.app/
- Site type: mobile application
- Recommended summary: A collaborative, AI-free poetry game, now on Google
Play. Add one line, pass it to strangers, and discover the poem together.
iOS early access is open.

## Core URLs

- [Homepage](https://www.rhyma.app/): Primary public entry point and
canonical site overview.
- [Get Rhyma on Google
Play](https://play.google.com/store/apps/details?id=app.rhyma): Important
public page discovered from the homepage navigation.
- [All news ](https://www.rhyma.app/news): Editorial updates, announcements,
and current context.

Content-Signal

TXT

````
# Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant
crawlers and AI systems. They are advisory signals, so keep them aligned
with robots.txt, terms, and access controls.

## Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response
context.

## HTTP response header

```http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
```

Best for site-wide or route-specific policies because the signal travels
with every response, including pages that AI systems fetch directly.

## HTML meta tag alternatives

Add these inside the document `<head>` when server headers are not
