Needs Work

## Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include AI guidance file and plain-text page access, while homepage access and crawler policy need attention. Recommended next step: remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

## Recommended next step

1. Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.
2. Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.
3. Point sitemap index entries to valid XML <urlset> sitemap files.

## Signal breakdown

### Crawlability

Fail 0/20

Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

### Robots.txt

Fail 0/15

Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.

### llms.txt

Pass 15/15

The llms.txt file was found and includes the expected text, length, heading, and URL signals.

### Sitemap

Fail 0/10

Point sitemap index entries to valid XML <urlset> sitemap files.

## Markdown support

Pass 15/15

The homepage returns markdown content when requested with Accept: text/markdown, giving AI systems a cleaner text representation with less navigation chrome to parse.

## Semantic HTML

Warn 7.1/10

Add exactly one h1 element that describes the page topic. Add missing semantic elements: main, article, nav, footer.

## Structured data

Pass 10/10

Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.

## Content signals

Pass 5/5

Consider adding Content-Signal HTTP header, AI-specific head meta tags, robots noai/noimageai directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.

## Suggested fixes

### llms.txt

#### MARKDOWN

```
# DiddyDesign | AI Image to Figma Converter
```

```
> AI design tool that converts any UI screenshot or image into a fully
editable, pixel-perfect Figma file in seconds. No manual recreation
required.
```

```
This llms.txt file summarizes the public, canonical resources that AI
assistants and crawlers should use to understand this site.
```

```
## Site Overview
```

```
- Canonical URL: https://diddydesign.com/
- Site type: software application
- Recommended summary: AI design tool that converts any UI screenshot or
image into a fully editable, pixel-perfect Figma file in seconds. No manual
recreation required.
```

```
## Core URLs
```

```
- [Homepage](https://diddydesign.com/): Primary public entry point and
canonical site overview.
```

```
## Content Recommendations
```

```
- Add one-sentence descriptions for product, service, documentation,
pricing, support, blog, and policy pages that should be easy for AI systems

## robots.txt additions

### TXT

```
# robots.txt additions
# Copy these blocks into the existing robots.txt file. Keep current rules
unless a note calls out a conflicting Disallow.

# AI crawler access
# Add explicit Allow rules for blocked AI crawlers; remove or narrow
conflicting Disallow rules if your crawler target requires precedence.

## Content-Signal

TXT

# Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

## Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

## HTTP response header

```
``http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
````
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

## HTML meta tag alternatives

Add these inside the document '<head>' when server headers are not
