Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include AI guidance file and sitemap, while homepage access and crawler policy need attention. Recommended next step: remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

Recommended next step

- 1. Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.
- 2. Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.
- 3. Make the homepage respond successfully to requests with Accept: text/markdown, either by serving markdown directly or by adding a markdown variant URL with correct content negotiation.

Signal breakdown

Crawlability Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.	Fail	0/20
Robots.txt Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.	Fail	0/15
llms.txt The llms.txt file was found and includes the expected text, length, heading, and URL signals.	Pass	15/15

Sitemap	Pass	10/10
The sitemap.xml file is valid and contains URL entries.		
Markdown support	Fail	0/15
Make the homepage respond successfully to requests with Accept: text/markdown, either by serving markdown directly or by adding a markdown variant URL with correct content negotiation.		
Semantic HTML	Warn	5.7/10
Shorten the title tag to 70 characters or fewer. Shorten the meta description to 160 characters or fewer. Add missing semantic elements: article.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding Content-Signal HTTP header, AI-specific head meta tags, robots noai/noimageai directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.		

Suggested fixes

MARKDOWN

KVM Virtualization, High Availability (HA) & Cloud Infrastructure - GirginOSVM

> Create, deploy and scale KVM virtual machines on your own hardware. GirginOSVM runs the control plane - RPO-0 HA, routed networking, storage, an AI copilot and an audit-grade REST API.

This llms.txt file summarizes the public, canonical resources that AI assistants and crawlers should use to understand this site.

Site Overview

- Canonical URL: <https://girginos.net/en>
- Site type: software application
- Recommended summary: Create, deploy and scale KVM virtual machines on your own hardware. GirginOSVM runs the control plane - RPO-0 HA, routed networking, storage, an AI copilot and an audit-grade REST API.

Core URLs

- [Homepage](<https://girginos.net/en>): Primary public entry point and canonical site overview.
- [Sales partnershipBring hardware - we build & license](<https://girginos.net/en/partners/sales>): Important public page discovered from the homepage navigation.
- [Strategic partnershipCapital & experience - ideally a

robots.txt additions

TXT

```
# robots.txt additions
# Copy these blocks into the existing robots.txt file. Keep current rules
unless a note calls out a conflicting Disallow.

# AI crawler access
# Add explicit Allow rules for blocked AI crawlers; remove or narrow
conflicting Disallow rules if your crawler target requires precedence.

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
'''http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
'''
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

HTML meta tag alternatives

Add these inside the document '`<head>`' when server headers are not
