OVERALL SCORE

50 /100

Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include AI guidance file and sitemap, while homepage access and crawler policy need attention. Recommended next step: remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

Recommended next step

1. Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.
2. Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.
3. Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Signal breakdown

Crawlability

Fail 0/20

Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

Robots.txt

Fail 0/15

Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.

llms.txt

Pass 15/15

The llms.txt file was found and includes the expected text, length, heading, and URL signals.

Sitemap

Pass 10/10

The sitemap.xml file is valid and contains URL entries.

Markdown support

Fail 0/15

Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Semantic HTML

Pass 10/10

The homepage has a valid title, meta description, heading structure, semantic landmarks, substantial body copy, and descriptive anchor text.

Structured data

Pass 10/10

Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.

Content signals

Pass 5/5

Consider adding Content-Signal HTTP header, AI-specific head meta tags, robots noai/noimageai directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.

Suggested fixes

llms.txt

MARKDOWN

```
# Track My Shares | Portfolio Tracker
```

```
> Track your US, Australian and crypto holdings. Generate tax reports, calculate capital gains, and manage your portfolio in one place.
```

```
This llms.txt file summarizes the public, canonical resources that AI assistants and crawlers should use to understand this site.
```

Site Overview

- Canonical URL: <https://trackmyshares.com/>
- Site type: web site
- Recommended summary: Track your US, Australian and crypto holdings. Generate tax reports, calculate capital gains, and manage your portfolio in one place.

Core URLs

- [Homepage](<https://trackmyshares.com/>): Primary public entry point and canonical site overview.
- [Features](<https://trackmyshares.com/features>): Important public page discovered from the homepage navigation.
- [Free tools](<https://trackmyshares.com/tools>): Important public page discovered from the homepage navigation.
- [Integrations](<https://trackmyshares.com/integrations>): Important public page discovered from the homepage navigation.

robots.txt additions

TXT

```
# robots.txt additions
# Copy these blocks into the existing robots.txt file. Keep current rules
unless a note calls out a conflicting Disallow.

# AI crawler access
# Add explicit Allow rules for blocked AI crawlers; remove or narrow
conflicting Disallow rules if your crawler target requires precedence.

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
``http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
````
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

## HTML meta tag alternatives

Add these inside the document '<head>' when server headers are not
