Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include AI guidance file and sitemap, while homepage access and crawler policy need attention. Recommended next step: remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

Recommended next step

- 1. Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.
- 2. Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.
- 3. Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Signal breakdown

Crawlability Fail 0/20

Remove AI crawler Disallow: / rules or replace them with narrower path-level restrictions for private content only.

Robots.txt Fail 0/15

Remove AI crawler Disallow: / rules or add narrower Allow/Disallow rules if AI crawlers should be able to discover public content.

llms.txt Pass 15/15

The llms.txt file was found and includes the expected text, length, heading, and URL signals.

Sitemap	Pass	10/10
The sitemap.xml file is valid and contains URL entries.		
Markdown support	Fail	0/15
Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.		
Semantic HTML	Pass	10/10
The homepage has a valid title, meta description, heading structure, semantic landmarks, substantial body copy, and descriptive anchor text.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding Content-Signal HTTP header, AI-specific head meta tags, robots noai/noimageai directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.

MARKDOWN
# RealMarketAPI - Realtime Market Data API for Developers

> Realtime market data API - free plan, no credit card. Live OHLC for
stocks, forex, crypto & metals via REST, WebSocket, MCP & Telegram Bot.
Sub-150ms latency.

This llms.txt file summarizes the public, canonical resources that AI
assistants and crawlers should use to understand this site.

## Site Overview

- Canonical URL: https://realmarketapi.com/en-US
- Site type: organization
- Recommended summary: Realtime market data API - free plan, no credit card.
Live OHLC for stocks, forex, crypto & metals via REST, WebSocket, MCP &
Telegram Bot. Sub-150ms latency.

## Core URLs

- [Homepage](https://realmarketapi.com/en-US): Primary public entry point
and canonical site overview.
- [Install Now
](https://chromewebstore.google.com/detail/realmarketapi-%E2%80%93-live-pric
/jlpomehkpfebmfcklonaehdfbkcoaoaa):
Important public page discovered from the homepage navigation.
- [Features](https://realmarketapi.com/en-US/features): Important public

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
'''http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
'''
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

HTML meta tag alternatives

Add these inside the document '`<head>`' when server headers are not
