PUBLIC AI VISIBILITY REPORT

postdecks.com

Scanned Jun 27, 2026, 11:01 UTC

OVERALL SCORE

46 /100

Needs Work

Executive summary

This site has a useful foundation, but important gaps still limit AI readability. Key strengths include homepage access and sitemap, while AI guidance file and plain-text page access need attention. Recommended next step: publish an AI guidance file as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

Recommended next step

1. Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.
2. Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.
3. Add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.

Signal breakdown

Crawlability

Pass 20/20

The homepage resolves, connects, returns HTTP 200 OK, exposes a canonical URL, and is not blocked by robots.txt.

Robots.txt

Warn 7.5/15

Fix robots.txt syntax issues so each rule uses Field: value format, directives appear under a User-agent, and Sitemap entries use absolute URLs.

llms.txt

Fail 0/15

Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

Sitemap

Pass 10/10

The sitemap.xml file is valid and contains URL entries.

Markdown support

Fail 0/15

Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Semantic HTML

Warn 8.6/10

Add missing semantic elements: article.

Structured data

Fail 0/10

Add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.

Content signals

Fail 0/5

Add the standard directive 'Content-Signal: ai-train=no, search=yes, ai-input=yes' to robots.txt, HTML metadata, or HTTP headers so AI systems can discover content usage preferences.

Suggested fixes

Fix Structured data

HTML

```
<script type="application/ld+json">
{
"@context": "https://schema.org",
"@graph": [
{
"@type": "Organization",
"@id": "https://postdecks.com/#organization",
"name": "PostDecks: social post preview tool",
"description": "Preview your post across X, LinkedIn, Instagram, Facebook,
plus Stories and Carousels. Export a PDF or PNGs for client sign-off.",
"url": "https://postdecks.com/",
"logo": "https://postdecks.com/icon.png",
"sameAs": [
"https://x.com/postdecks"
]
},
{
"@type": "WebSite",
"@id": "https://postdecks.com/#website",
"name": "PostDecks: social post preview tool",
"description": "Preview your post across X, LinkedIn, Instagram, Facebook,
plus Stories and Carousels. Export a PDF or PNGs for client sign-off.",
"url": "https://postdecks.com/",
"publisher": {
"@id": "https://postdecks.com/#organization"
}
}
]
}
</script>
```

Fix Content signals

HTML

```
<meta http-equiv="Content-Signal" content="ai-train=no, search=yes,
ai-input=yes" />
<meta name="content-signal" content="ai-train=no, search=yes, ai-input=yes"
/>
```
