

# LLM Scan

PUBLIC AI VISIBILITY REPORT

www.pxlsafe.com

Scanned Jun 29, 2026, 11:01 UTC

OVERALL SCORE

**33** /100

Poor

## Executive summary

This site is difficult for AI tools to read right now. Key strengths include sitemap, while AI guidance file and plain-text page access need attention. Recommended next step: publish an AI guidance file as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

## Recommended next step

1. Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.
2. Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.
3. Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access; serve a non-empty HTML homepage with a canonical link tag.

## Signal breakdown

### Crawlability

Warn 10/20

Review AI crawler Disallow rules and keep only the paths that should be excluded from AI crawler access; serve a non-empty HTML homepage with a canonical link tag.

### Robots.txt

Warn 7.5/15

Fix robots.txt syntax issues so each rule uses Field: value format, directives appear under a User-agent, and Sitemap entries use absolute URLs.

### llms.txt

Fail 0/15

Publish /llms.txt as text or markdown with more than 200 characters, markdown headings, and at least one absolute URL.

## Sitemap

Pass 10/10

The sitemap.xml file is valid and contains URL entries.

## Markdown support

Fail 0/15

Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

## Semantic HTML

Warn 5.7/10

Shorten the title tag to 70 characters or fewer. Shorten the meta description to 160 characters or fewer. Avoid skipped heading levels so sections progress from h1 to h2 to h3 without gaps.

## Structured data

Fail 0/10

Add JSON-LD structured data with Organization or WebSite schema so AI systems can identify the site owner or website entity.

## Content signals

Fail 0/5

Add the standard directive 'Content-Signal: ai-train=no, search=yes, ai-input=yes' to robots.txt, HTML metadata, or HTTP headers so AI systems can discover content usage preferences.

## Suggested fixes

### Fix Structured data

#### HTML

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": "Organization",
      "@id": "https://www.pxlsafe.com/weddx#organization",
      "name": "Weddx Turn a card of wedding footage into a finished cut, inside Premiere Pro | PxlSafe",
      "description": "Drop in your wedding footage. Weddx watches every clip, builds a story-driven cut on your Premiere timeline, then colors, styles, and titles it. You just refine.",
      "url": "https://www.pxlsafe.com/weddx",
      "logo": "https://www.pxlsafe.com/favicon.svg",
      "sameAs": [
        "https://www.instagram.com/pxlsafe/",
        "https://www.youtube.com/@pxlsafe"
      ]
    },
    {
      "@type": "WebSite",
      "@id": "https://www.pxlsafe.com/weddx#website",
      "name": "Weddx Turn a card of wedding footage into a finished cut, inside Premiere Pro | PxlSafe",
      "description": "Drop in your wedding footage. Weddx watches every clip, builds a story-driven cut on your Premiere timeline, then colors, styles, and titles it. You just refine. Continued in the full scan report..."
    }
  ]
}
```

### Fix Content signals

#### HTML

```
<meta http-equiv="Content-Signal" content="ai-train=no, search=yes, ai-input=yes" />
<meta name="content-signal" content="ai-train=no, search=yes, ai-input=yes" />
```
