

OVERALL SCORE

100/100

AI - Ready

Executive summary

This site is in strong shape for AI discovery and readability. Key strengths include homepage access and crawler policy, and no major issues were detected. Keep the current setup under review as more checks are added.

Recommended next step

1.

Keep the public pages stable and crawlable.
2.

Rescan after major product, pricing, docs, sitemap, or robots.txt changes.
3.

Share the report with marketing, engineering, and product so ownership stays clear.

Signal breakdown

Crawlability

Pass20/20

The homepage resolves, connects, returns HTTP 200 OK, exposes a canonical URL, and is not blocked by robots.txt.

Robots.txt

Pass15/15

robots.txt allows crawler access and includes Sitemap references.

llms.txt

Pass15/15

The llms.txt file was found and includes the expected text, length, heading, and URL signals.

Sitemap

Pass10/10

The sitemap.xml file is valid and contains URL entries.

Markdown support	Pass	15/15
The homepage returns markdown content when requested with Accept: text/markdown, giving AI systems a cleaner text representation with less navigation chrome to parse.		
Semantic HTML	Pass	10/10
The homepage has a valid title, meta description, heading structure, semantic landmarks, substantial body copy, and descriptive anchor text.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding AI-specific head meta tags, robots noai/noimageai directive, Content-Signal robots.txt directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.		

Suggested fixes

llms.txt
MARKDOWN
<pre># 3Dogs - Decision Intelligence for Calls You Can't Take Back > 3Dogs runs your highest-stakes decision past independent AI models that argue it out, then returns one documented recommendation with the dissent preserved. This llms.txt file summarizes the public, canonical resources that AI assistants and crawlers should use to understand this site. ## Site Overview - Canonical URL: https://3dogs.ai/ - Site type: organization - Recommended summary: 3Dogs runs your highest-stakes decision past independent AI models that argue it out, then returns one documented recommendation with the dissent preserved. ## Core URLs - [Homepage](https://3dogs.ai/): Primary public entry point and canonical site overview. - [Nexus](https://3dogs.ai/capabilities/): Important public page discovered from the homepage navigation. - [Pointer](https://3dogs.ai/pointer/): Important public page discovered from the homepage navigation. - [Bloodhound](https://3dogs.ai/bloodhound/): Important public page</pre>

robots.txt additions

TXT

```
# robots.txt additions
# Copy these blocks into the existing robots.txt file. Keep current rules
unless a note calls out a conflicting Disallow.

# AI crawler access
# Add explicit Allow rules for AI crawlers so public content permissions are
clear.
User-agent: Claude-Web
Allow: /

# Crawl-rate guidance
# Add Crawl-delay under a User-agent block when the site needs gentler
crawler pacing.
User-agent: *
Crawl-delay: 10
```

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
'''http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
'''
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

HTML meta tag alternatives

Add these inside the document '`<head>`' when server headers are not
