AI - Ready

Executive summary

This site is technically ready for AI crawlers to read. Key strengths include homepage access and AI guidance file, while crawler policy and page structure need attention. Recommended next step: publish the crawler policy file with explicit crawler rules and Sitemap references so search and AI crawlers can discover site policy.

Recommended next step

1. Shorten the meta description to 160 characters or fewer.
2. Publish /robots.txt with explicit crawler rules and Sitemap references so search and AI crawlers can discover site policy.

Signal breakdown

Crawlability The homepage resolves, connects, returns HTTP 200 OK, exposes a canonical URL, and is not blocked by robots.txt.	Pass	20/20
Robots.txt Publish /robots.txt with explicit crawler rules and Sitemap references so search and AI crawlers can discover site policy.	Warn	15/15
llms.txt The llms.txt file was found and includes the expected text, length, heading, and URL signals.	Pass	15/15
Sitemap The sitemap index is valid and the checked child sitemap contains URL entries.	Pass	10/10

Markdown support	Pass	15/15
The homepage returns markdown content when requested with Accept: text/markdown, giving AI systems a cleaner text representation with less navigation chrome to parse.		
Semantic HTML	Warn	8.6/10
Shorten the meta description to 160 characters or fewer.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding AI-specific head meta tags, robots noai/noimageai directive, Content-Signal robots.txt directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.		

Suggested fixes

llms.txt
MARKDOWN
<pre># Picmim: Social media posts written for your business.</pre>
<pre>> Picmim writes social media posts tailored to your business. Approve what you like, skip what you don't, and keep posting consistently without spending hours creating content.</pre>
<pre>This llms.txt file summarizes the public, canonical resources that AI assistants and crawlers should use to understand this site.</pre>
<pre>## Site Overview</pre>
<pre>- Canonical URL: https://picmim.com/ - Site type: organization - Recommended summary: Picmim writes social media posts tailored to your business. Approve what you like, skip what you don't, and keep posting consistently without spending hours creating content.</pre>
<pre>## Core URLs</pre>
<pre>- [Homepage](https://picmim.com/): Primary public entry point and canonical site overview. - [Pricing](https://picmim.com/pricing): Pricing, plans, and packaging information. - [Teams](https://picmim.com/teams): Important public page discovered from the homepage navigation. - [Slovenscina, SL](https://picmim.com/sl): Important public page discovered</pre>

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
```http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
```
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

HTML meta tag alternatives

Add these inside the document `<head>` when server headers are not
