

OVERALL SCORE

85 /100

AI - Ready

Executive summary

This site is in strong shape for AI discovery and readability. Key strengths include homepage access and crawler policy, while plain-text page access needs attention. Recommended next step: add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Recommended next step

- 1. Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.

Signal breakdown

Crawlability The homepage resolves, connects, returns HTTP 200 OK, exposes a canonical URL, and is not blocked by robots.txt.	Pass	20/20
Robots.txt robots.txt allows crawler access and includes Sitemap references.	Pass	15/15
llms.txt The llms.txt file was found and includes the expected text, length, heading, and URL signals.	Pass	15/15
Sitemap The sitemap.xml file is valid and contains URL entries.	Pass	10/10

Markdown support	Fail	0/15
Add content negotiation for Accept: text/markdown on the homepage and return a markdown representation with Content-Type: text/markdown. Keep the HTML response for regular browser requests.		
Semantic HTML	Pass	10/10
The homepage has a valid title, meta description, heading structure, semantic landmarks, substantial body copy, and descriptive anchor text.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding AI-specific head meta tags, robots noai/noimageai directive, Content-Signal robots.txt directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.		
Suggested fixes

Content-Signal

```
TXT
# Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

## Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

## HTTP response header

'''http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
'''

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

## HTML meta tag alternatives

Add these inside the document '<head>' when server headers are not
