

OVERALL SCORE

90 /100

AI - Ready

Executive summary

This site is in strong shape for AI discovery and readability. Key strengths include crawler policy and AI guidance file, while homepage access needs attention. Recommended next step: serve a non-empty HTML homepage with a canonical link tag that points to the preferred public URL.

Recommended next step

- 1. Serve a non-empty HTML homepage with a canonical link tag that points to the preferred public URL.

Signal breakdown

Crawlability Serve a non-empty HTML homepage with a canonical link tag that points to the preferred public URL.	Warn 10/20
Robots.txt robots.txt allows crawler access and includes Sitemap references.	Pass 15/15
llms.txt The llms.txt file was found and includes the expected text, length, heading, and URL signals.	Pass 15/15
Sitemap The sitemap.xml file is valid and contains URL entries.	Pass 10/10

Markdown support	Pass	15/15
The homepage returns markdown content when requested with Accept: text/markdown, giving AI systems a cleaner text representation with less navigation chrome to parse.		
Semantic HTML	Pass	10/10
The homepage has a valid title, meta description, heading structure, semantic landmarks, substantial body copy, and descriptive anchor text.		
Structured data	Pass	10/10
Valid JSON-LD structured data was found with core Organization or WebSite schema.org types.		
Content signals	Pass	5/5
Consider adding robots noai/noimageai directive, Content-Signal robots.txt directive so AI systems can consistently discover content usage preferences across robots.txt, HTTP headers, and HTML metadata.		

Suggested fixes

llms.txt
MARKDOWN
<pre># AI visibility scanner - LLM Scan LLM Scan > Run a free scan to see whether your website is readable, crawlable, and structured for AI answer engines. This llms.txt file summarizes the public, canonical resources that AI assistants and crawlers should use to understand this site. ## Site Overview - Canonical URL: https://www.llmscan.dev/ - Site type: organization - Recommended summary: Run a free scan to see whether your website is readable, crawlable, and structured for AI answer engines. ## Core URLs - [Homepage](https://www.llmscan.dev/): Primary public entry point and canonical site overview. - [Leaderboard](https://www.llmscan.dev/leaderboard): Important public page discovered from the homepage navigation. - [Docs](https://www.llmscan.dev/docs): Documentation and implementation guidance for the site. - [Sign in](https://www.llmscan.dev/login): Important public page discovered from the homepage navigation. - [LLM Scan](https://peerpush.net/p/llm-scan): Important public page Continued in the full scan report...</pre>

robots.txt additions

TXT

```
# robots.txt additions
# Copy these blocks into the existing robots.txt file. Keep current rules
unless a note calls out a conflicting Disallow.

# Crawl-rate guidance
# Add Crawl-delay under a User-agent block when the site needs gentler
crawler pacing.
User-agent: *
Crawl-delay: 10
```

Content-Signal

TXT

Content-Signal recommendations

Use these directives to make AI-use preferences explicit for compliant crawlers and AI systems. They are advisory signals, so keep them aligned with robots.txt, terms, and access controls.

Recommended values

- ai-train=no: AI model training, fine-tuning, and dataset creation.
- search=yes: AI search indexing, snippets, and discovery.
- ai-input=yes: AI answer grounding, retrieval, and generated-response context.

HTTP response header

```
'''http
Content-Signal: ai-train=no, search=yes, ai-input=yes
Content-Usage: train-ai=n
'''
```

Best for site-wide or route-specific policies because the signal travels with every response, including pages that AI systems fetch directly.

HTML meta tag alternatives

Add these inside the document '`<head>`' when server headers are not
